#### **DETAILED ACTION**

## Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1 and 9 are rejected under USC 101 as the claimed invention is directed to non-statutory subject matter. For a claim to be statutory under 35 USC 101 the following two conditions must be met:

1) In the claim, the practical application of an algorithm or idea results in a useful, concrete, tangible result,

#### **AND**

2) The claim provides a limitation in the technological arts that enables a useful, concrete, tangible result.

As to the technology requirement, note MPEP Section IV 2(b). Also note In re Waldbaum, 173USPQ 430 (CCPA 1972) which teaches "useful arts" is synonymous with "technological arts". In Musgrave, 167USPQ 280 (CCPA 1970), In re Johnston, 183USPQ 172 (CCPA 1974), and In re Toma, 197USPQ 852 (CCPA 1978), all teach a technological requirement.

The invention in the body of the claim must recite technology. If the invention in the body of the claim is not tied to technological art, environment, or machine, the claim is not statutory. Ex parte Bowman 61USPQ2d 1665, 1671 (BD. Pat. App. & Inter. 2001) (Unpublished)

### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Application/Control Number: 09/751,630

Art Unit: 3628

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Veeneman et al (US 5,754,981 A) (hereinafter Veeneman).

Veeneman discloses (see columns 1-16, but in particular columns 1-6) claims 1-20 including allowing access to a personal data preferences program via a consumer device, coding the selected personal data preferences, downloading the coded personal data preferences to the consumer device, allowing the consumer device to transfer the coded personal data preferences to a storage media, a processing unit, a network interface in communication with the processing unit and operable to be coupled to an electronic network, memory in conjunction with said processing unit and containing a plurality of instructions which when executed by the processing unit causes the above mentioned steps to take place. Veeneman does not describe other types of personal data preferences. Claims 2-8 and 10-16 are rejected as being dependant upon rejected independent claims 1 and 9.

However, because it would have been common sense and advantageous and would have allowed a more comprehensive and efficient personal data system it would have been obvious to one skilled in the art at the time of the invention to also have incorporated personal information into the data gathering, coding, and storage process.

It is noted that claims 1 and 9 merely describe the entering, transferring, and storage of information (coded data), which is old and quite well known. Coded data could be read as handwriting, which is language or information reduced to coded symbols. A storage media is no more than a paper notebook to record handwriting.
